

The power to deliver, cleaner greener events.  
**No fumes. No mess. No noise.**

## Case Study

Temporary power case study written for:

- Business owners
- Long term need
- Temporary power
- Construction
- Outdoors
- Welfare units

## PROBLEM

getYards is a growing company using a franchise model that finds unused land and turns it into securable storage space.

Typically, the land has no access to power, but they need to provide 24/7 security, access control, electric gates and power for its users.

At the time this was being powered with **a fuel-based generator**, consuming **3 litres of fuel an hour!** On top of the weekly hire costs, it was totally uneconomical.

## SOLUTION

powerQuad worked with Sam Stone to understand the whole need, the power and battery requirements and offered a solution.

This process was very quick with a decision to go ahead within hours.

Our team were able **to install the following day** and **monitored the system** to provide support, **remotely** and **on site**.

## OUTCOME

powerQuad saved Get Yard **over 40% on costs.**  
No fuel hassle, no fire risk, no noise
